I'm seeking a position as a junior developer within the scope of education. Currently, I'm studying full stack web development at UCR extension. Graduated in 2006 with a BA in business economics from Cal State San Bernardino. I've worked as a teacher for the last eight years and have taught science and history at the secondary level. Over the years I've worked with teams of teachers, parents, counselors, administrators and of course students. Seeing students overcome obstacles and reach their goals is very rewarding. It's a great feeling to be thanked by a former student. Whether playing a team sport, coaching a team sport, or working as a teacher; collaboration, communication, organization, and time management have contributed to my success and to the success of those around me. I approach problems analytically and as I acquire more knowledge in web development and programming I seek to create more educational opportunities for students of all ages. I hope to be an asset for your organization.

TECHNICAL SKILLS

Frontend: HTML, CSS, JQuery, Javascript, Bootstrap, AJAX,
Backend: Node

PROJECTS

SuggestSoCal app | <https://github.com/mitch-t/SuggestSoCalapp.git>
<https://mitch-t.github.io/SuggestSoCalapp/>

Collaborator

- This app uses api data to assist users in choosing activities in Southern California.
- This project demonstrates the AJAX method and Javascript functions to retrieve data. The app has a clean lay-out and responsive design. I was responsible for the Javascript and AJAX functions.
- **Tools/Languages:** HTML, CSS, JavaScript, JQuery, AJAX, Materialize CSS

Password Generator | <https://github.com/mitch-t/pwgenerator.git>
<https://mitch-t.github.io/pwgenerator>

Developer

- This creates a random password based on user input.
- I was the sole creator of this project. This project uses a for loop in Javascript to create the random password.
- **Tools/Languages:** HTML, CSS, JavaScript, Bootstrap

Weather Dashboard | <https://github.com/mitch-t/weatherdash.git> |
<https://mitch-t.github.io/weatherdash/>

Developer

- Weather app with current conditions and a five day forecast.
- The "Weather Dashboard" presents users with a search box and two local cities. When the user clicks on a city name or inputs a city name they are presented with the current weather conditions as well as a 5 day forecast. I was the sole developer of this project.
- **Tools/Languages:** HTML, CSS, JavaScript, JQuery, AJAX.

WORK EXPERIENCE
